Full Day: \$120 Weekly: \$360 diesel additional

Description

The FF175 Fan Forced Space diesel heater produces 175,000 BTU or 49KW of heat. The unit requires 240v power to run the fan and the spark transformer.

This forced air heater has a thermostat control where one can set the unit to run up to a predetermined temperature. When the air temperature reaches this level, the heater automatically shuts off. Equally when the temperature drops below the thermostat setting, the heater automatically turns back on. Along with the thermostat, the diesel heater has a digital display showing the ambient air temperature.

The heater has a 49 litre fuel tank allowing for a runtime of approximately 10 hours

Price: \$120 Full day| \$360 Weekly, diesel additional
