

## MINI SKID STEER EQUIPMENT

## SPECIAL INSTRUCTIONS:

- 1. A license for high risk work or a verification of competency is not required to operate this equipment; however, persons must be familiar with safe operating procedures to observe and be competent in the operation of the machine and the attachment before being allowed to perform work with the machine.
- 2. Unregistered machinery and equipment must not be driven on a public roadway unless a permit to do so has been obtained from the relevant Traffic Authority.
- 3. Check with relevant authority to ensure that services, cables, etc., will not be damaged during work with loader or attachments.
  - Provide barricades or rails around work area to ensure that unauthorised access cannot occur while machine is being operated.

Sequence	Identified hazards	Key processes to be followed	Precautions / PPE required
1. Pre-start checks	Fuel and fluids	Check fuel, hydraulic oil, engine oil, transmission oil, coolant and battery.	Wear eye and hand protection.
	Tyres	Check tyre condition and pressures; remove any mud lumps from treads.	Ensure tyres are properly inflated and that
	Tracks (tracked units)	Check condition and tension of tracks (sag between 2.5mm and 3.8mm).	wheel nuts are secure.
	Lights and alarms	Check horn, reversing alarm, lights and instruments.	Checks drive motor assemblies for any
	Steering and brakes	Test steering both ways, and check operation of brakes and park brake.	damage or leaks.
	Attachments	Inspect all components to ensure that they are securely attached.	
2. Attachments	Wear or damage	Inspect attachments for wear, damage, or loose or missing parts.	Support attachment if working underneath.
		Ensure that attachments are securely fitted, and safety pins or clips fitted.	Wear <b>gloves</b> when fitting attachments.
	Hydraulics	Check arms and connections for excessive wear.	Locking pins must be fitted.
		Inspect hoses and connections for splits, bulges, leaks or fractures.	Refer to operator's manual for correct
		Test all hydraulic operations before applying load.	operating procedures for attachments.
		Check rams, hoses and connections for splits, leaks or fractures.	Raise attachment for travel.
		Test operation by raising and lowering attachment.	
<b>3.</b> Operator position	Slipping and falls	Do not use operating levers as hand holds to assist entry into and exit from operator's	Keep operator's platform clean, and remove
		position.	any oil, grease, mud or loose stones which
	Controls	All levers and gauges must be clearly identified, within easy reach and be easily read.	could cause a person to slip and fall.
		Preferred orientation should be such that all needles are in vertical position during	
		correct operating conditions.	Ventilate workspace if necessary.
	Exhaust fumes	Exhaust must not allow excessive fumes to enter operator's breathing zone.	Avoid operation in enclosed workplaces.
		Provide forced ventilation (or self-contained breathing apparatus) where machine is	
		used in enclosed or poorly-ventilated workplaces or excavations, etc.	
4. Travel	Passengers	Passengers must not be carried on skid steer equipment.	Check terrain before travelling.
	Loss of control	Do not travel at speeds which may cause control to be lost over bumps, etc.	Avoid changing gear on slopes.
		Avoid driving over obstacles, ditches, drains, etc. which could affect control.	Travel down a slope in low gear, use engine
		Avoid travel across slope on a steep incline.	compression as brake.
	Overturning	Avoid sharp turns or turning at speed.	Slow down to turn.

## MINI SKID STEER EQUIPMENT

Sequence	Identified hazards	Key processes to be followed	Precautions / PPE required
<b>5.</b> Operation	Overloading	Do not attempt to lift load in excess of the rated capacity of loader.	Observe load plate limits.
	Overturning	Reduce speed when travelling with load on front attachment.	Head, eye and hearing and foot protection
		Carry load close to ground and racked back for stability and visibility.	may be required in some work situations.
		Do not raise load until ready to deposit.	Wear high-visibility garment when
	Dust, falling objects, noise	Appropriate protective equipment should be used where hazards may be encountered	working on roads or where other traffic will
		during operation.	be encountered.
		Foot protection must be worn where a hazard to feet may exist.	
<b>6.</b> Parking	Stability	Park machine on level ground if possible.	
		Position machine "up and down" the slope if parking on sloping ground.	
		Apply handbrake, place transmission in neutral or "park" position.	
		Lower attachments fully and release pressure from hydraulic lines.	Do not leave machine unattended with
	Security	Switch off engine and remove keys before leaving machine unattended.	engine running.
7. Maintenance	Burns	Allow engine to cool before removing radiator cap.	Hand protection should be worn.
		Check tyres and rims for damage, and check tyre pressures.	Ensure all tyres are inflated to recommended
		If rubber tracks fitted, ensure that they are not loose on tyres or rims.	pressure.
8. Transport	Loading and unloading	Ensure that area where machine is to be unloaded or loaded is secured from traffic and	See SWP Transport of Plant and Machinery.
		pedestrians with barriers or cones, etc., before commencing.	Ensure that machine is secured against
		Position truck or trailer to minimise ramp slope, and apply park brake.	movement, and that park brake is ON.
		Load rubber tyred machine onto truck or trailer by reversing slowly up ramp (rear of	
		machine facing UP ramp), with bucket in lowered position.	

## PRECAUTIONS:

The following precautions are to be observed in areas where these procedures are carried out.
